

Situation of 06 December 2021 edition of the hours 14-next update 09-12-2021 hours 14, forecaster: MM

reliability: 80%

Avalanche danger 3 (considerable): Julian Alps, Canin area; 2 (moderate): Carnic Alps, Prealps.

Thermal Zero: 800 m
T.average 1000: -2 °C
T.average 2000: -7 °C

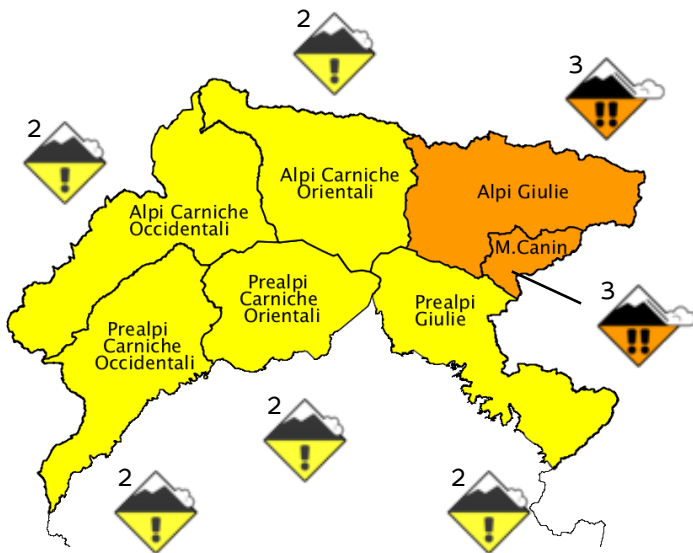

Weather by OSMER - ARPA FVG:
Cloudy in the morning then generally clear skies.

Station	quota (m)	snow depth (cm)	fresh snow (cm)	Tmin (°C)	Tmax (°C)
RIFUGIO TAMAI - ZONCOLAN	1750	56	20	-8,5	-6
VARMOST M.TE SIMONE	1870	62	20	-8	-3
SELLA NEVEA - LIVINAL LUNC	1837	124	27	-8	-6
PIANCAVALLO	1280	12	0	-8	0
TARVISIO	800	52	32	-8	1,5

Snow cover conditions and avalanche danger: During the weekend, moderate snowfall affected the mountain even at low altitudes (20 cm west, 30 cm east). Due to winds, new accumulations of snow formed, which are not always easily identifiable. On the Julian Alps and in the Canin area, avalanche danger is 3 (considerable): Above the treeline, at all exposures, in areas with wind-blown accumulations, especially under ridges, passes, and along gullies, a chance of small- and medium-sized slab avalanches, mainly with high overload, is not excluded. On steeper slopes, chance of triggered avalanches, even with low overload. Larger avalanches are also possible in the Canin area. In the Carnic Alps and Pre-Alps, avalanche danger is 2 (moderate). On higher slopes, chance of small- and medium-sized triggered avalanches, mainly with high overload. Small- and medium-sized natural avalanches are possible throughout the territory on steep slopes.

Forecast for Tuesday 07 December 2021, reliability: 70%

Avalanche danger 3 (considerable): Julian Alps, Canin area; 2 (moderate): Carnic Alps, Prealps.

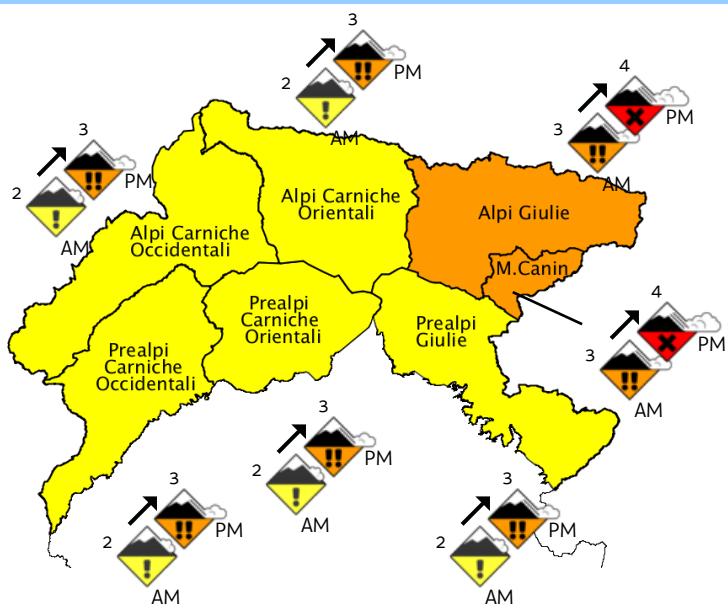

Thermal Zero: 700 m
T.average 1000: -2 °C
T.average 2000: -7 °C

Weather by OSMER - ARPA FVG:
Variable in the morning, then generally clear skies.

Snow cover conditions and avalanche danger: Cloudy skies with continued low temperatures. The snowpack will be moderately consolidated, due to the presence of snow-blown accumulations, which are not always clearly identifiable. On the Julian Alps and in the Canin area, avalanche danger will be 3 (considerable). Above the treeline, at all exposures, in areas with wind-blown accumulations, especially under ridges, passes, and along gullies, a chance of small- and medium-sized slab avalanches, mainly with high overload, is not excluded. On steeper slopes, chance of triggered avalanches, even with low overload. Larger avalanches are also possible in the Canin area. In the Carnic Alps and Pre-Alps, avalanche danger is 2 (moderate). On higher slopes, chance of small- and medium-sized triggered avalanches, mainly with high overload. Small- and medium-sized natural avalanches are possible throughout the territory on steep slopes.

Forecast for Wednesday 08 December 2021, reliability: 60%

Danger increasing to 4 (high): Julian Alps, Canin area, 3 (considerable): Carnic Alps, Prealps.

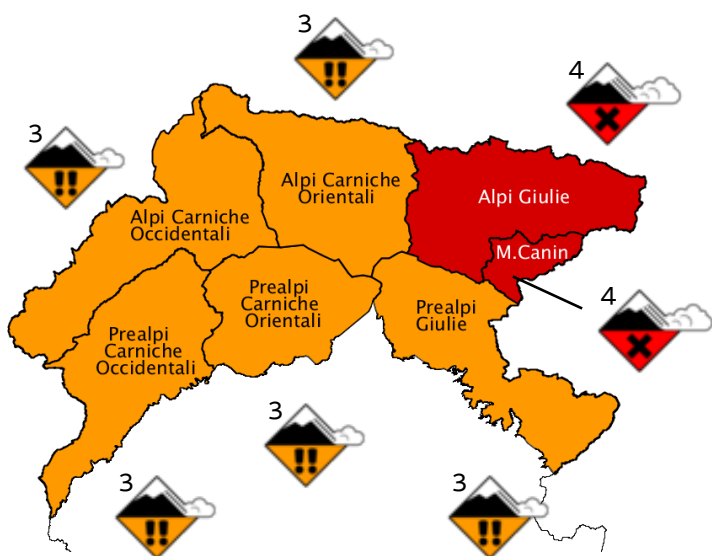

Thermal Zero: 700 m
T.average 1000: -3 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Cloudy in the morning, then overcast with heavy snow.

Snow cover conditions and avalanche danger: Overcast skies and heavy snowfall expected in the afternoon throughout the entire mountain territory, starting from approximately 500 m, accompanied by sustained southerly winds. On the Julian Alps and in the Canin area, avalanche danger will be 3 (considerable), increasing to 4 (high) from the afternoon/evening. Above 1800 m, on steep slopes at all exposures, chance of both medium- and large-sized natural avalanches and triggered avalanches, both medium and also large, even with a low overload. In the Carnic Alps and Pre-Alps, avalanche danger will be 2 (moderate), increasing to 3 (considerable) from the afternoon/evening. Above approximately 1800 m, on steep slopes at all exposures, natural fresh-snow and triggered avalanches will be possible, generally of medium size, mainly with high overload. Locally not excluded, even with low overload and larger in size. Road access could also be impeded at high altitudes.

Forecast for Thursday 09 December 2021, reliability: 60%

Avalanche danger 4 (high): Julian Alps and Canin area; 3 (moderate): Carnic Alps, Prealps.

Thermal Zero: 600 m
T.average 1000: -1 °C
T.average 2000: -6 °C

Weather by OSMER - ARPA FVG:
Variable to cloudy skies with residual rainfall in the morning.

Snow cover conditions and avalanche danger: Residual snowfall will affect the territory until the morning. The amount expected could reach 50 cm, almost throughout. On the Julian Alps and Canin area, avalanche danger will be 4 (high). Above approximately 1800 m, on steep slopes at all exposures, chance of both medium- and large-sized natural avalanches, as well as triggered medium- and also large-sized avalanches, even with low overload. In the Carnic Alps and Pre-Alps, avalanche danger will be 3 (considerable) from the afternoon/evening. Above approximately 1800 m, on steep slopes at all exposures, chance of natural fresh-snow and generally medium-sized avalanches with high overload. Locally not excluded even with low overload and larger in size. Road access could also be impeded at high altitudes.
